

## THE AVALANCHE HAZARD WILL BE LOW

### Avalanche Hazard Forecast for Thursday 13/01/2022

#### Avalanche Problems

#### Forecast Snow Stability & Avalanche Hazard

Little change is expected. The snowpack will continue to thaw, but will be well consolidated and stable in all areas. Greatest accumulations will be on North-West through North to East aspects above 900m. Below this altitude, only patchy snow cover will remain and will diminish further through the forecasting period. The avalanche hazard will be Low.

#### Forecast Weather Influences

The freezing level will remain well above the summits for the duration of the forecasting period. No precipitation is expected. Winds will be gale force from the West-South-West.

#### Comments

High pressure set to dominate for the rest of the week. Run outs continue to be serious due to the exposed rocks and there is a threat from rock fall underneath cliffs.
