Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Thu 13/01/2022 TO 18:00HRS Fri 14/01/2022

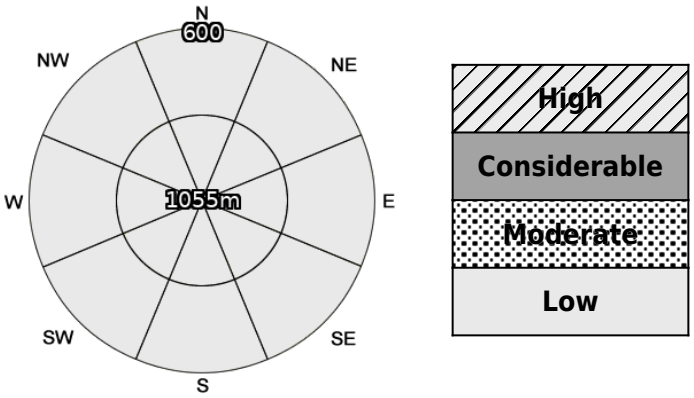

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Friday 14/01/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Little change. The patchy and wet snowpack will continue to thaw at all levels and will have good stability throughout. Many summits and slopes will be bare. Most snow will remain on high North to East aspects, on ridge flanks, round coire rims and in gullies and runnels. Little snow below 600 metres. The avalanche hazard will be Low.

Forecast Weather Influences

Patchy light rain and drizzle will persist overnight, but will ease during the day, becoming largely dry. However, there will be extensive hill fog throughout the period. The strong South-West wind will become light by daybreak, backing Southerly in the afternoon. The freezing level will remain well above the summits.
