

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Thu 13/01/2022 TO 18:00HRS Fri 14/01/2022

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Patchy light rain and drizzle will persist overnight, but will ease during the day, becoming largely dry. However, there will be extensive hill fog throughout the period. The strong South-West wind will become light by daybreak, backing Southerly in the afternoon. The freezing level will remain well above the summits.

Forecast Snow Stability and Avalanche Hazard

Little change. The patchy and wet snowpack will continue to thaw at all levels and will have good stability throughout. Many summits and slopes will be bare. Most snow will remain on high North to East aspects, on ridge flanks, round coire rims and in gullies and runnels. Little snow below 600 metres. The avalanche hazard will be Low.

Observed Avalanche Hazard - Thu 13/01/2022

Observed Weather Influences

A very mild day with patchy light rain and drizzle at all levels and a strong South-West wind, gale force at times around the summits. The freezing level was well above the summits.

Observed Snow Stability and Avalanche Hazard

The patchy and wet snowpack is thawing at all levels and has good stability throughout. Many slopes and summits are devoid of snow. Most snow remains on high North to East aspects, on ridge flanks, round coire rims and in gullies and runnels. Little snow exists below 600 metres. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions	Diminishing and fragmented snowpack, most snow remains above 800 metres. Cloud base was around 700 metres, with some bright spells in the afternoon. Winds 20 -30 mph with stronger gusts at higher elevations.
