

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Fri 14/01/2022 TO 18:00HRS Sat 15/01/2022

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

It will be a dry day with strengthening Southerly winds. The freezing level will drop to about 1000 meters through the period.

Forecast Snow Stability and Avalanche Hazard

At higher levels the snowpack will freeze and consolidate in the colder conditions. At lower levels it will continue to slowly thaw. Stability will be good in both cases. The avalanche hazard will be Low.

Observed Avalanche Hazard - Fri 14/01/2022

Observed Weather Influences

It was a mild but dry day with light winds. The freezing level was well above the highest summits.

Observed Snow Stability and Avalanche Hazard

The spring snowpack continues to slowly thaw and consolidate. The greatest accumulations tend to be on North to East aspects above 700 meters. Stability is generally good in all locations. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions

Wet snow throughout. Good visibility at higher levels, layers of cloud at lower levels. Calm conditions.

Comments

The snowpack at higher levels has the potential to become very hard and icy when it freezes.
