Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Fri 14/01/2022 TO 18:00HRS Sat 15/01/2022

Hazard Leve	Avalanche Probabilty
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerabl	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderat	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

It will be a dry cloudy day with light to moderate South-South-Westerly winds. The freezing level will be around 700 metres.

Forecast Snow Stability and Avalanche Hazard

The remaining snow cover will begin to refreeze and be well bonded and stable throughout. Largest areas of snow will remain on North to East aspects above 850 metres, elsewhere the snow cover will be very patchy. The avalanche hazard will be Low.

Observed Avalanche Hazard - Fri 14/01/2022

Observed Weather Influences

Today was mild with light Westerly winds. It was clear and sunny on the summits, cloudy at lower elevations.

Observed Snow Stability and Avalanche Hazard

The remaining snow is continuing to gradually thaw and diminish, and is stable in all locations. Greatest snow accumulations remain on North to East aspects above 850 metres, elsewhere the snow cover is becoming increasingly patchy. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions	Diminishing snowpack, clear on the summits with cloud below, winds approx 10mph or less.
Comments	Some light snow forecast for Saturday night.
