## Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sat 15/01/2022 TO 18:00HRS Sun 16/01/2022

Hazard Level	Avalanche Probabilty
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate:	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

#### Forecast Weather Influences

The freezing level will rise above the summits overnight when there will be some light rain with sleet on the highest summits. The freezing level will then drop to around 700 metres and it will be a dry day. Moderate South-West winds will veer West-North-West.

## Forecast Snow Stability and Avalanche Hazard

The snowpack will remain well bonded and stable. Greatest snow cover will be on North to East aspects above 850 metres. The avalanche hazard will be Low.

# **Observed Avalanche Hazard - Sat 15/01/2022**

#### Observed Weather Influences

It was a dry day with moderate South-Westerly winds. The freezing level was around 850 metres.

## Observed Snow Stability and Avalanche Hazard

The snowpack is well bonded and stable. Above around 800 metres the surface is firm and frozen. At lower elevations the limited patchy snow is slowly thawing. The avalanche hazard is Low.

Mountain	Conditions
----------	------------

Observed Mountain Travel Conditions	Snow surface frozen above 800 metres. Cloud base around 900 metres. Winds 10 - 20 mph.
Comments	Milder conditions forecast to return for Monday and Tuesday.
