

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 17/01/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Although there will be some softening of the snowpack at lower altitudes it will remain well bonded and stable throughout. Greatest amounts are on North-West through North to East facing coire back walls, ridge flanks and plateau areas above 950 metres. Below 950 metres the snowpack will be very limited and patchy. The avalanche hazard will be Low.

Forecast Weather Influences

Dry conditions throughout the forecast period. Strong West-North-Westerly winds will gradually ease to moderate and back to become South-Westerly in direction through the afternoon. The 900 metre freezing level will rise above the summits.

Comments

A good day in prospect during Monday, looking more unsettled with gales and precipitation during Tuesday.
