

THE AVALANCHE HAZARD WILL BE LOW**Avalanche Hazard Forecast for Tuesday 18/01/2022****Avalanche Problems****Forecast Snow Stability & Avalanche Hazard**

Little change expected. Lingering patches of snow will continue to slowly thaw at all levels, and will be stable and generally firm throughout. Most snow will exist along coire rims, in gullies and runnels and crag aprons, on North to East aspects. Little snow remains below 600 metres. The avalanche hazard will be Low.

**Forecast Weather Influences**

Remaining dry overnight and through the morning, with thickening cloud and a little light rain at all levels expected in the afternoon. South-South-West winds will gradually strengthen through the period becoming strong to gale force. The freezing level will remain above the summits.

Comments

Despite the relatively mild conditions, it will feel cold in the strong winds.
