Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Wed 19/01/2022 TO 18:00HRS Thu 20/01/2022

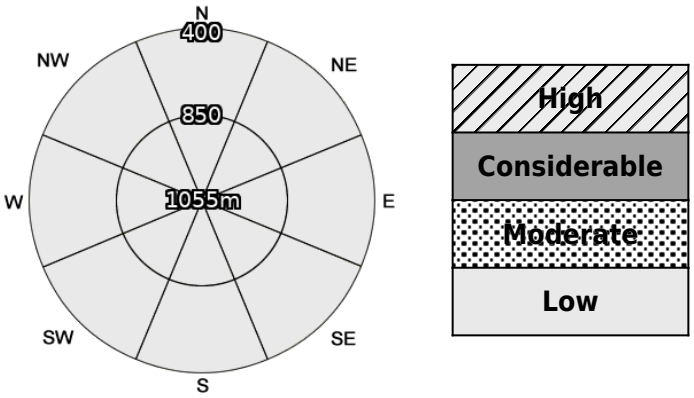

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 20/01/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

New snow amounts will remain largely insignificant, mostly an overall dusting above 500 metres, with isolated slightly deeper accumulations in high sheltered East to South aspects. The patchy older snowpack will be frozen, well consolidated and stable throughout, very firm at higher elevations. The avalanche hazard will be Low.

Forecast Weather Influences

The scattered wintry showers will ease overnight, leaving a largely dry day. The strong Northerly airflow will moderate overnight, backing Westerly by the end of the period. The freezing level will dip to near glen levels overnight, but will gradually rise to around 700 metres through the day.

Comments

Milder again on Friday and Saturday, with freezing levels rising to highest summit level and above.
