

THE AVALANCHE HAZARD WILL BE LOW**Avalanche Hazard Forecast for Saturday 22/01/2022****Avalanche Problems****Forecast Snow Stability & Avalanche Hazard**

Snow cover will remain limited with greatest accumulations to be found in the higher Northerly and Easterly corries. The surface of much of the snowpack will begin to soften as rain and milder conditions take effect, stability will generally remain good. In sheltered locations such as gullies and watercourses a firm icy surface will persist. The avalanche hazard will be Low.

**Forecast Weather Influences**

Fresh to strong West-South-Westerly winds with drizzle and light rain will affect all altitudes as the freezing level rises above the summits.

Comments

Where present firm snow surface will require caution.
