

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 22/01/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Little change expected. Remaining snow will be firm, well bonded and stable. Some softening of the snow is likely later in the afternoon. Greatest amounts will be found in North to East facing corries above 900 metres and towards the main Cairngorms. The avalanche hazard will be Low.

Forecast Weather Influences

Another dry day is expected with the freezing levels remaining above the summits. Strong winds, initially Westerly but backing to the West-South-West in the afternoon.

Comments

The old snow ice is very firm and icy with short run-outs. Trips and slips will potentially have serious consequences.
