

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sun 23/01/2022 TO 18:00HRS Mon 24/01/2022

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Little change is expected in the weather. It will remain cloudy with some light drizzle possible from time to time. The freezing level will be around 1300 metres through the day. Winds will be from the South-West.

Forecast Snow Stability and Avalanche Hazard

Little change in the snowpack. It will continue to slowly thaw and consolidate. Stability will be good throughout. The avalanche hazard will be Low.

Observed Avalanche Hazard - Sun 23/01/2022

Observed Weather Influences

It was slightly cooler than of late with a freezing level of around 1100 metres. It was cloudy but generally dry. Winds were from the South-West.

Observed Snow Stability and Avalanche Hazard

Below 1100 meters the snowpack continues to slowly thaw. Above this level the snowpack is firmer due to the slightly cooler conditions. Stability is good at all altitudes. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions

Wet snowpack. Cloud base was at 800 metres all day. Winds 30-40 mph at higher levels.

Comments

Main snowpack deposits in high North and East facing corries.
