Southern Cairngorms

Issued 23/01/2022

Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Sun 23/01/2022 TO 18:00HRS Mon 24/01/2022

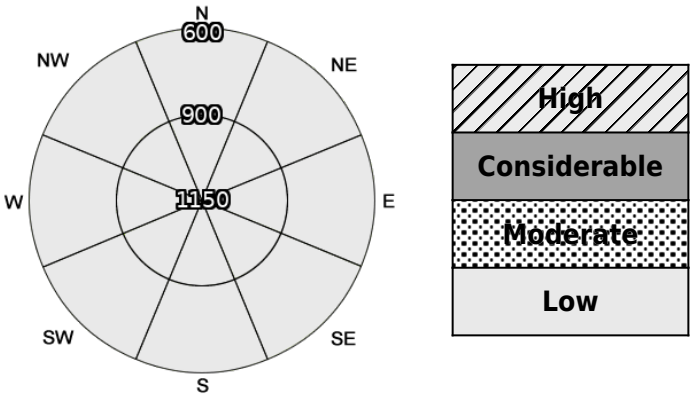

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 24/01/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

There will be no change to the current situation with well bonded and stable, patchy snow present. Very little snow will be encountered below 900 metres. Above this altitude the largest areas will be found on North to East facing slopes, especially in steeper, wind sheltered locations. The avalanche hazard will be Low.

Forecast Weather Influences

No precipitation has been forecast for the next twenty-four hour period. Strong South-Westerly winds overnight, decreasing to become moderate Westerlies during the afternoon. The freezing level will fluctuate between 1100 and 1400 metres during daylight hours.

Comments

Significant wind chill today: Less strong winds forecast for Monday.
