Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 24/01/2022 TO 18:00HRS Tue 25/01/2022

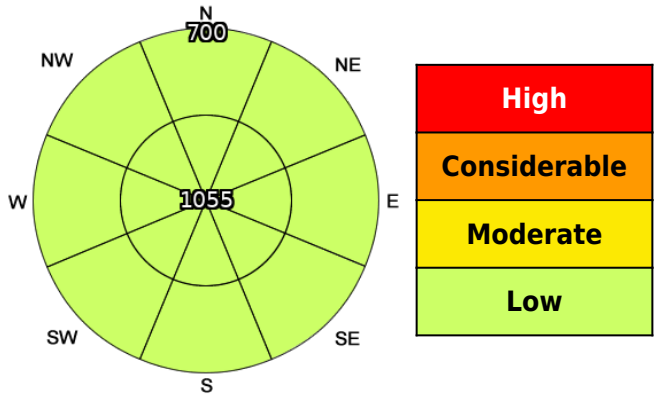
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 25/01/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Little change expected. The thawing and stable snow cover will be very limited, with the few remaining snow patches lingering in high North to East aspects above 700 metres. The mountains will be mostly bare and snow patches will be avoidable. The avalanche hazard will be Low.



Forecast Weather Influences

Summit cloud with patchy rain and drizzle will persist throughout the period. Moderate South-South-West winds will steadily freshen through the day and the freezing level will remain above the highest summits.

Comments

There is the possibility of some sleet on the highest summits tomorrow, but unlikely. Otherwise, more of the same over the next few days; cloudy, generally unseasonably mild with rain and drizzle at times and strengthening winds. Colder on Thursday.
